

Somatic & Behavioral Prep Packet

Prepared for Secure Somatic Therapy Session Intake

Patient Nickname: **Tester Grace (GRACE-C-01)**
Assessment Period: **May 1, 2026 - May 23, 2026**
Somatic Anxiety Tags: **Chest tightness, Stomach knots, Hyperventilation**

Clinical Summary & Session Preparation

This prep packet synthesizes self-reported journal and narrative logs written by the client. It highlights recurring somatic stress flags and avoidance patterns to support clinician intake and somatic grounding exercises.

Somatic Stress Flags: 3 entries mention tight chest / restricted breathing, 4 entries mention 'stomach knot' reactions, and 3 entries detail workplace elevator avoidance.

Attachment Patterns: Anxious-avoidant behaviors are noted during interactions with coworker Marco.

Key Somatic Anchors

- Somatic response: Physical freezing reaction when coworker approaches.
- Behavior modification: Avoiding the lobby elevator, walking 14 flights of stairs.
- Triggers: Sound of voice or proximity in pantry workspace.

This intake prep packet is to be used solely to guide the somatic therapeutic alliance.

SOMATIC COMPANION INTAKE RECORD - ENTRY 1

Focus: Coworker proximity in pantry counter space**Assessment Date:** May 23, 2026**Somatic Reaction:** Frozen reaction, chest tightening, stomach dropped**Narrative Detail:**

Client reports coworker came behind her while preparing coffee. Stood close, blocked path. Client experienced immediate physical freezing, rapid heart rate, and an abandoned task.

Clinical Interpretation:

The physical freezing and avoidance (stairs) are classic protective nervous response adaptations. Grounding exercises should target deep chest breathing, vagal toning, and restoring personal boundary safety.

SOMATIC COMPANION INTAKE RECORD - ENTRY 2

Focus: Elevator lobby encounter

Assessment Date: May 19, 2026

Somatic Reaction: Avoidant flight behavior, rapid pulse

Narrative Detail:

Client avoided the elevator lobby entirely after coworker blocked door and made remarks. Walked 14 flights of stairs instead. Restricting her access to common areas.

Clinical Interpretation:

The physical freezing and avoidance (stairs) are classic protective nervous response adaptations. Grounding exercises should target deep chest breathing, vagal toning, and restoring personal boundary safety.

SOMATIC COMPANION INTAKE RECORD - ENTRY 3

Focus: Desk side intrusion**Assessment Date:** May 14, 2026**Somatic Reaction:** Shallow breathing, freezing**Narrative Detail:**

Coworker leaned over her desk shoulder while lunch hour was empty. Experienced shallow breathing and did not speak.

Clinical Interpretation:

The physical freezing and avoidance (stairs) are classic protective nervous response adaptations. Grounding exercises should target deep chest breathing, vagal toning, and restoring personal boundary safety.

SOMATIC COMPANION INTAKE RECORD - ENTRY 4

Focus: Coworker proximity in pantry counter space**Assessment Date:** May 23, 2026**Somatic Reaction:** Frozen reaction, chest tightening, stomach dropped**Narrative Detail:**

Client reports coworker came behind her while preparing coffee. Stood close, blocked path. Client experienced immediate physical freezing, rapid heart rate, and an abandoned task.

Clinical Interpretation:

The physical freezing and avoidance (stairs) are classic protective nervous response adaptations. Grounding exercises should target deep chest breathing, vagal toning, and restoring personal boundary safety.

VERBATIM SOMATIC JOURNAL TRANSCRIPT - ENTRY 1

Journal entry: May 23, 2026

"Avoiding the lobby completely now. Walked up 14 flights of stairs. Chest felt so tight. Physical avoidance."

Clinical Cue:

Note somatic focus: tight chest and restricted diaphragmatic breathing. The client details walking the stairs as active avoidant coping. This reveals high hyperarousal when entering physical locations.

VERBATIM SOMATIC JOURNAL TRANSCRIPT - ENTRY 2

Journal entry: May 22, 2026

"Decided to avoid lunch in the pantry. Knotted stomach is persistent."

Clinical Cue:

Note somatic focus: tight chest and restricted diaphragmatic breathing. The client details walking the stairs as active avoidant coping. This reveals high hyperarousal when entering physical locations.

VERBATIM SOMATIC JOURNAL TRANSCRIPT - ENTRY 3

Journal entry: May 21, 2026

"Felt the anxiety in my chest again. Walking up the stairs today because he was by the lobby."

Clinical Cue:

Note somatic focus: tight chest and restricted diaphragmatic breathing. The client details walking the stairs as active avoidant coping. This reveals high hyperarousal when entering physical locations.

VERBATIM SOMATIC JOURNAL TRANSCRIPT - ENTRY 4

Journal entry: May 20, 2026

"He made another joke today. Sexual stuff disguised as humor. Frozen nervous response."

Clinical Cue:

Note somatic focus: tight chest and restricted diaphragmatic breathing. The client details walking the stairs as active avoidant coping. This reveals high hyperarousal when entering physical locations.

VERBATIM SOMATIC JOURNAL TRANSCRIPT - ENTRY 5

Journal entry: May 19, 2026

"Writing this down so I don't forget the details. Shallow breathing, frozen reaction."

Clinical Cue:

Note somatic focus: tight chest and restricted diaphragmatic breathing. The client details walking the stairs as active avoidant coping. This reveals high hyperarousal when entering physical locations.

VERBATIM SOMATIC JOURNAL TRANSCRIPT - ENTRY 6

Journal entry: May 18, 2026

"Stomach is in knots today. Just walking into the building makes me tense."

Clinical Cue:

Note somatic focus: tight chest and restricted diaphragmatic breathing. The client details walking the stairs as active avoidant coping. This reveals high hyperarousal when entering physical locations.

VERBATIM SOMATIC JOURNAL TRANSCRIPT - ENTRY 7

Journal entry: May 17, 2026

"The chest tightness hasn't gone away since yesterday. Grounding thoughts needed."

Clinical Cue:

Note somatic focus: tight chest and restricted diaphragmatic breathing. The client details walking the stairs as active avoidant coping. This reveals high hyperarousal when entering physical locations.

VERBATIM SOMATIC JOURNAL TRANSCRIPT - ENTRY 8

Journal entry: May 16, 2026

"Planning my exit route when leaving. Waiting until 6:30 PM so the lobby is clear of coworkers."

Clinical Cue:

Note somatic focus: tight chest and restricted diaphragmatic breathing. The client details walking the stairs as active avoidant coping. This reveals high hyperarousal when entering physical locations.

VERBATIM SOMATIC JOURNAL TRANSCRIPT - ENTRY 9

Journal entry: May 15, 2026

"Avoiding the lobby completely now. Walked up 14 flights of stairs. Chest felt so tight. Physical avoidance."

Clinical Cue:

Note somatic focus: tight chest and restricted diaphragmatic breathing. The client details walking the stairs as active avoidant coping. This reveals high hyperarousal when entering physical locations.

VERBATIM SOMATIC JOURNAL TRANSCRIPT - ENTRY 10

Journal entry: May 14, 2026

"Decided to avoid lunch in the pantry. Knotted stomach is persistent."

Clinical Cue:

Note somatic focus: tight chest and restricted diaphragmatic breathing. The client details walking the stairs as active avoidant coping. This reveals high hyperarousal when entering physical locations.
